Subject: Front End Technology

Subject code: 25CAH-655

Assignment No.: 2

Student Name: Roshan Kumar Singh

UID: 25MCA20067

Branch: MCA (Gen)

Section/Group: 25MCA-KAR-1

Submitted to: Prof. Juned Alam

Date of Submission: 24-04-2026

Q) Create a counter application page using React and Redux with increment and decrement functionality.

Ans:-

App.jsx

```
import { createSlice, configureStore } from '@reduxjs/toolkit'
import { Provider , useSelector , useDispatch } from 'react-redux'

const slice = createSlice({
    name: 'counter',
    initialState : { value: 0},
    reducers : {
        inc : (state) => { state.value++ },
        dec : (state) => { state.value--}
    }
})

const store = configureStore({
    reducer: {
        counter : slice.reducer
    }
})

function Counter () {
    const count = useSelector ((state) => state.counter.value)
    const dispatch = useDispatch ()

    return (
        <div style = {{ textAlign : 'center', marginTop : '50px'}}>
            <h1> Count : {count} </h1>
            <button onClick = {() => dispatch (slice.actions.inc())}>
                +inc </button>
            <button onClick = {() => dispatch (slice.actions.dec())}>
                -dec </button>
        </div>
    )
}
```

```
function App () {
    return (
        <Provider store = {store} >
            <Counter />
        </Provider>
    )
}

export default App
```
